PROGRAM REPORT

ONE DAY WORKSHOP ON RESEARCH AND SPSS

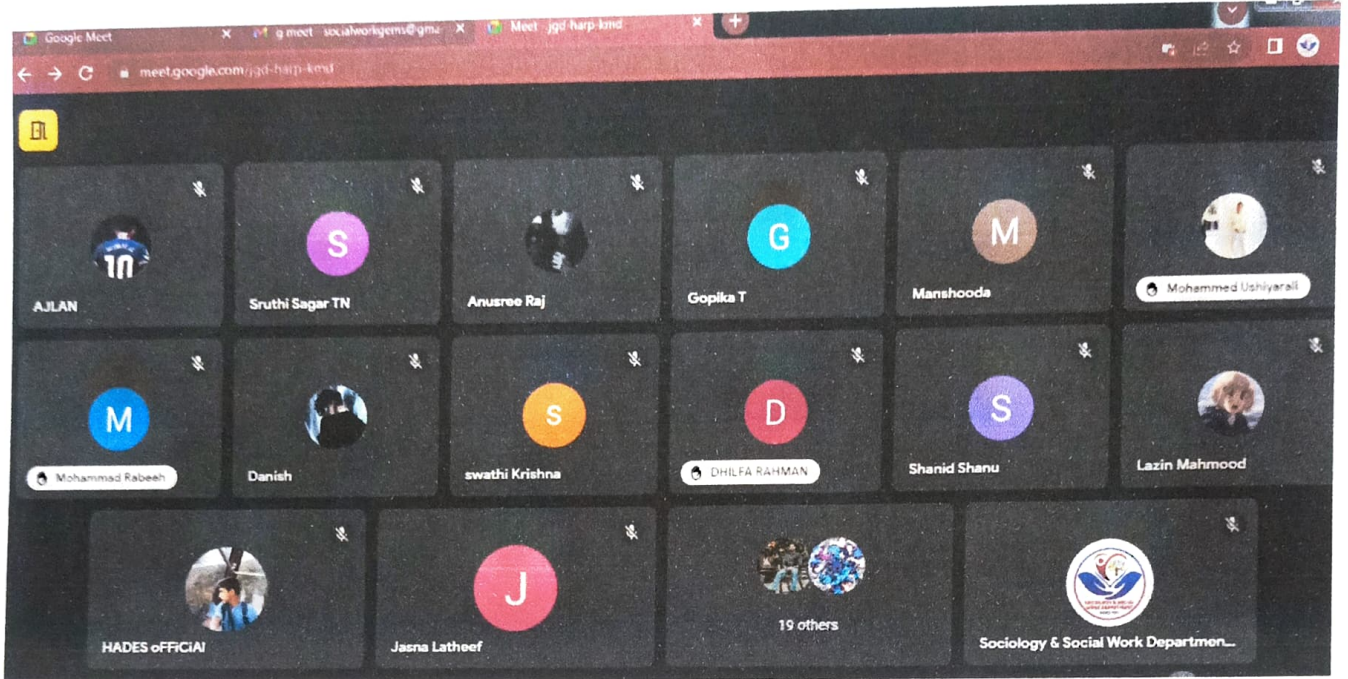

14.01.2020

PG Department of Social Work and Sociology organized a one-day workshop on Research and SPSS on 14/01/2020 (Tuesday) in the department. SPSS (Statistical Package for the Social Sciences) is a software program used by researchers in various disciplines for quantitative analysis of complex data. This workshop introduces the SPSS environment, basic data preparation and management, descriptive statistics, and common statistical analysis (T-test, ANOVA, correlation, regression). Hands-on activity with example data is provided to learn these basics. Although the name of SPSS reflects its original use in the field of social sciences, its use has since expanded into other data markets. SPSS is commonly used in healthcare, marketing, and education research. The types of data analyzed using SPSS are widely varied. Common sources include survey results, organization customer databases, Google Analytics, scientific research results, and server log files. SPSS supports both analysis and modification of many kinds of data and almost all formats of structured data. The software supports spreadsheets, plain text files, and relational databases such as SQL, SATA, and SAS. SPSS provides data analysis for descriptive and bivariate statistics, numeral outcome predictions, and predictions for identifying groups. The software also provides data transformation, graphing, and direct marketing features. The total number of students who participated in this session was fifty and three faculties also. Although the session was very informative for the trainees to enhance their knowledge in the field of research.
