EMPLOYER FEEDBACK

INTRODUCTION

Employer's feedback is very vital in the decision making and design of curriculum and career developmental plan of the students in a University. Producing employable graduates has now become an important part of any University or College concerns in education process. The full educational spectrum of values starts from imparting knowledge and understanding up to the development of skills and attitudes. With the growing and increasing number of graduates, competition for jobs has become fiercer and employers now look not only for academic achievement but with other attributes and soft skills such as the demonstration of key workplace skills namely communication, problem solving and teamwork since these attributes are now essential requirements for enhancing a student's employability.

The institution is also responsible for justifying and documenting the qualifications of faculty who are instrument in accomplishing the mission and goals of the institution. An environment conducive for learning is a huge factor to consider for an education to be more effective, reason why student's time and space should be allowed so that interaction within the learning and teaching process is developed.

RECOMMENDATIONS

Based on the feedback received, it is highly recommended that the students shall develop the communication skill and the college should initiate more skill development programs. Revision of the syllabus which can enhance employability skills shall be recommended.
